CHAPTER 1: BUSINESS/CORPORATE CATEGORY ACTIVITY DATA, 1972

The activity data presented in this chapter were provided by Aviation Data Service, Inc., Wichita, Kansas, and have been compiled for the aircraft types shown for calendar year 1972 for the business/corporate user category.

The business/corporate category includes those users who are described by the following definitions:

- Business - Any use of an aircraft not for compensation or hire by an individual for the purpose of transportation required by a business in which he is engaged.
- Corporate - Any use of an aircraft by a corporation, company, or other organization for the purpose of transporting its employees and/or property not for compensation or hire and employing professional pilots for the operation of the aircraft.

For brevity, the various aircraft types are referred to by a numerical designation throughout this report. Table 1 is a definition of the aircraft types.

ADS estimates of the number of aircraft in operation and hours of service are given in Table 2. It may be noted that these data vary somewhat from the official statistical information published by the FAA.

The FAA data are based upon information submitted by the owners of AC Form 8050-63, "Aircraft Registration Eligibility, Identification and Activity Report". AC Form 8050-73's primary aim is to verify that the aircraft is legally eligible to be carried on the U.S. Civil Aircraft Register. Secondary aim is to provide a back-up and cross-check on aircraft and owner identification data. Part II OF AC Form 8050-73 requests the owner to voluntarily submit total hours flown by the specific aircraft during the previous 12 calendar months.

ADS has found that segments of the civil aviation community have steadfastly refused to voluntarily provide "activity" information on AC Form 8050-73. This is due in part to the possible Federal uses of "activity" information relative to new Federal user fees for aircraft.

ADS relies upon surveys to supplement the publically available information on aircraft in operation and annual flight hours. In addition, considerable judgment on the part of the ADS staff is added to arrive at the activity values. This information is complemented by information provided through parts/service operations of the major manufacturers, reports from aircraft spotters, and used trading volume which is monitored by ADS.

CHAPTER 2: COST DATAOperating Costs, 1972

The costs associated with operating Business/Executive aircraft in calendar year 1972 were compiled by Aviation Data Service, Inc., Wichita, Kansas into nine cost centers. The specific cost centers include:

Variable Costs (\$/hour)

- Fuel and Oil
- Airframe and Avionics Maintenance and Overhaul
- Engine Maintenance and Overhaul.

Fixed Costs (\$/year)

- Annualized Investment
- Hull Insurance
- Medical and Liability Insurance
- Hangar, Storage, or Tie Down
- Federal Registration Fee and Weight Tax
- Miscellaneous .

Fuel and Oil Costs (\$/hour)

Fuel and oil cost per hour are based on the average consumption rate of 75 percent power. Airframe and engine manufacturers recommended fuel type were used for all calculations. The dollar amounts presented in the cost tables, include state and federal fuel tax.

Airframe and Avionics Maintenance and Overhaul Cost (\$/hour)

This cost center includes all labor and parts costs associated with scheduled and unscheduled airframe and avionics maintenance and overhaul.

Engine Maintenance and Overhaul (\$/hour)

Engine maintenance and overhaul includes costs for scheduled and unscheduled engine maintenance, overhaul, 100, 1000 and/or annual inspections. Includes also midpoint and cycle costs for turbine engine.

(9)

Annualized Investment (\$/year)

The purpose of the annualized investment cost center is to represent an annual dollar amount for the ownership cost of the aircraft itself. A straight line annualizing schedule applied to the aircraft's first year retail price, including 3 percent sales tax, has been used by ADS. These values were modified during this research program (see Volume I).

Hull Insurance (\$/year)

Hull insurance cost is the annual premium paid to insure the aircraft against damage while in motion or at rest. A deductible amount is normally included.

Liability and Medical Insurance (\$/year)

Liability insurance premiums are paid to insure the aircraft owner against damage to persons or property by reason of his operation of the aircraft.

Hangar, Storage and Tie Down (\$/year)

Hangar, storage and tie down rates are averaged from known regional hangar rates, parking fees, and manufacturer suggested rates.

Federal Registration Fee and Weight Tax (\$/year)

The Federal registration fee and weight tax went into effect July 1, 1970. The rates are:

- Reciprocating powered aircraft - \$25 plus \$0.02 per pound for aircraft over 2,500 pounds gross weight.
- Turbine powered aircraft - \$25 plus \$0.035 per pound gross weight.

Operating costs for all ADS aircraft types except 4, 5, 10 and 14 are given in Tables 3 through 12. All costs are given in current dollars.

TABLE 12

J. H. '25 Sep 74

Miscellaneous (\$/year)

Miscellaneous costs include allowance for the state aircraft registration fees, training, catering, landing fees, navigation materials, airworthiness directive requirements and minor modifications.

Retail Value, 1972

New and used prices are a composite of make and model available during investment year by type category.

New prices are based on manufacturer's retail equipped prices as delivered from the factory. Modifications performed during the distributor/dealer loop are not included as those aircraft are purchased less equipment and return to approximate factory equipped retail prices when delivered.

Used prices are based on average retail sales price for particular make and model sold during investment year. All used aircraft are equipped with average equipment, have at least one half remaining hours on the engine and are in current license. No allowance is made for modifications or equipment installations. Such changes have little effect on used aircraft prices.

All costs shown in Tables 13 through 22 are retail dollar value current in investment year.

CHAPTER 3: CORPORATE OWNER CHARACTERISTICS

Fortune 1000 Corporations

The information in this section is a condensation of the data provided by Aviation Data Service, Inc. in its report "Super Corporation Aviation" dated September 1973. The data are for calendar year 1972.

The first row gives the following information:

- Company name
- Location, City and State
- 2-Digit SIC Code
- Number of aircraft types operated by company
- Number of airplanes of each type
- Aircraft type
- Ranking for 1972 based on sales.

The second row gives the following information:

- Sales, in thousands of dollars
- Assets, in thousands of dollars
- Net Income, in thousands of dollars
- Stockholders Equity, in thousands of dollars
- Number of employees.

The data are contained in Table 23. A guide to the aircraft type designation is contained in Table 24.

Additional 2000-Aircraft Sample

Aviation Data Service, Inc. provided the aircraft and owner data for the corporate-owned aircraft tabulated in Table 25.

The first row gives the following information:

- Aircraft type (see Table 1)
- Company name
- Company city
- Company state
- Company zip code
- Aircraft manufacturer
- Aircraft model
- Aircraft serial number
- Aircraft year of manufacture
- "N" number
- Four-digit SIC code.

With regard to the last four items, the SIC code is represented by the last four digits, the "N" number by the preceding five characters, the year of manufacture by the preceding two, and the serial number by the remaining characters to the left.

The second line gives:

- Sales, in dollars
- Net income, in dollars
- Employees
- Assets, in dollars
- Stockholders equity, in dollars.
